DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1, drawn to an air-mill system structure for generating of an electrical energy.
 - II. Claim 2, drawn to an air capturing and airflow regulating system for an air-mill.
 - III. Claim 3, drawn to an assembly of magnets for increasing the performance of an alternator used in an air-mill.
 - IV. Claim 4, drawn to a structure of the main axle with extensions used in the air-mill system.
2. The inventions are distinct, each from the other because of the following reasons: Inventions of Group I through IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, functions and effects.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined indicating if it is done with or without traverse (37 CFR 1.143).

Conclusion

5. When the claims are amended, applicant(s) should state in detail where in the original disclosure or in the drawings the amended features find support. No new matter may be introduced.
